
Pages visited today - not counting

Posted by JEB - 2006/06/11 01:27

I installed the counter module yesterday at around 10:00pm at night and it was counting pages hits etc just fine. Shortly after midnight though I checked and 'Pages visited today' had returned to zero, and since the last 40 mins or so has not counted any page hits. I've checked and the server clock seems to be in sync with my P.C, give or take a few mins. Can anyone suggest what may be going wrong here please?

Pages visited today should be 0 at 0:00 am, since it states the number of visits during this day only. Maybe i don't understand your problem?

From midnight onwards for about 2 hours (didn't stay up any later than that) the counter didn't increase at all when I flicked between pages. It works through the day fine, but certainly didn't work for that period after midnight the other night. My server is set to the correct time as I checked.
